impactx

ImpactX™ molecular semi-rigid properties for enhanced safety

Guaranteed unbreakable for life

WHAT IS Z87+

ANSI Z87.1 is the American National Standard that covers the basic requirements for personal eye and face protective devices to minimize or prevent injuries from impacts, non-ionizing radiation and chemical agents in occupational, educational and military environments. This Standard sets criteria related to the description, general requirements, testing, marking, selection, care and use of these protectors.

+ is an additional requirement of ANSI Z87.1 standard which provides more strict and severe impact tests:

Penetration (1.56 oz – 44.2 gm / 50 in – 127 cm)
High Mass Impact (17.6 oz – 500 gr / 50 in – 127 cm)
High Velocity Impact resistance (150 ft/s – 46 m/s).

"Superb quality & unmatched clarity; that is what comes to mind when I think of Rudy Project. Since trying my first pair over a year ago I have been using them exclusively when I am on the range. Simply put, if there were better shooting glasses I would be using them - Rudy Project is the best"
